

Equity, Diversity & Inclusion

Our EDI Committee works to support a diverse and representative community, helping to ensure the Biochemical Society's activities are open, transparent, and available to all. Our committees, boards, and panels aim for a range of expertise and experience to better reflect those working across the molecular biosciences.

EDI Community

We bring together EDI in STEM organisations from across our international community to share ideas and opportunities and create collaborative partnerships

Digital resources

We incorporate accessibility requirements across all online platforms and communications, embedding practices such as correct colour contrasts on our website, fuzzy search functions, and the use of alt text and subtitles

Accessible meetings

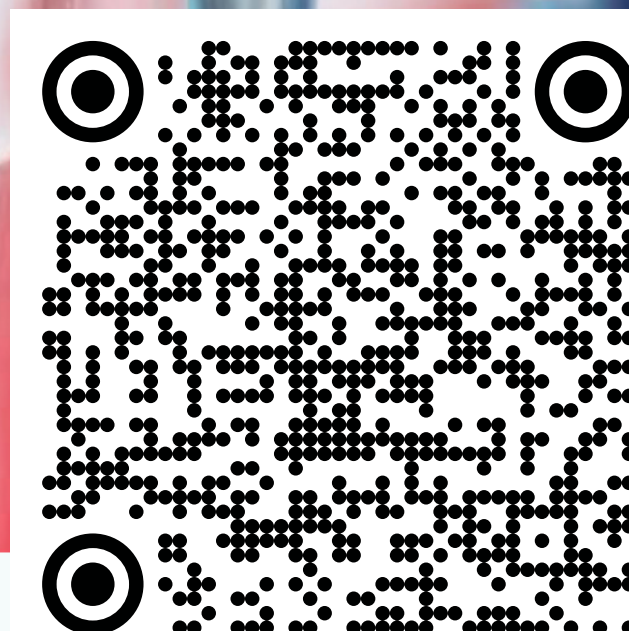

Accessibility is considered across our meeting calendars, including management of time differences, dates of religious festivals, and the provision of quiet spaces for delegates

Open science

As an independent society publisher, we're pursuing equitable, inclusive, and sustainable open practices that support the bioscience community and provide all authors with compliant open access
