We’re pleased to welcome you to the next edition of the Biennial International LRRK2 Meeting. The programme will explore the genetic forms of PD, the LRRK2 gene and the LRRK2 protein, as well as basic LRRK2 signaling mechanisms, and physiological and pathological functions of LRRK2. In addition, non-neuronal LRRK2 signaling, particularly with respect to neuroinflammation and the immune system in PD, will be covered as well as the role of LRRK2 in non-PD conditions and current clinical trials.

The diverse and inclusive programme will include opportunities for networking, and an emphasis will be placed on ensuring the event offers early career researchers with the vital opportunities needed to build their wider research networks with leading experts in the field. We’re welcoming abstracts for both oral communications and poster presentations, from both industry and academia and across all career stages. The meeting will be of particular interest to those working in biochemistry, neuroscience, biotechnology and pharmaceuticals.
